

## 'SU MISURA' FENICE MILANO: THE CAR SEWN ON YOU

After ten years from its launch, the Ferrari 360 Modena is still one of the most loved by the fans of supercars, with a 'rampant' career that marked an important technical-stylistic turn for the sedan rear engine cars of the 'Cavallino', introducing the characteristics later developed with the F430 and F458 Italia.

An in-depth study of the shapes in the wind tunnel determined a thinning of the body lines, in particular in the front, in the underbody and in the slides extractors of the back. The general rounding of the body results in a greater aerodynamic raciness, while the exclusive use of aluminum permitted to realize a frame weighing a total of 1.290 for the whole car, the 28% less of the F355 one, a value that added to the 0,33 Cx permit the Modena to reach a top speed of 295 km/h and to accelerate from 0 to 100 km/h in 4,5 seconds.

Fenice Milano presents today '**Su Misura F101**', the renewed version of this masterpiece of technique, including the integration of internal and external aesthetical components made in composite materials (carbon fibre) and fiberglass. The restyling, realized in 2008 from direct request of the client, includes the equipment of new 20" rims forged in aluminum and partitioned in three pieces, assembled with tires measuring 225/30 in the front and 315/25 in the rear, suspensions with totally adjustable shock absorbers and springs and a stainless steel exhaust system. Moreover a new ECU combined with a new suction system has been studied to improve considerably the performance of the car.

In the passenger compartment the roll bar and the adjustable seats are in carbon, while the dashboard has been integrated with a multimedia navigation center and a satellite alarm.

The '**Su Misura**' line was studied by Fenice Milano to satisfy at best the desire of its clients who already possess luxury supercars or who prefer to buy and personalize them according to their personal taste, with customized enhancements. Studying together with the client the best solutions to answer his requests and carrying out special feasibility studies, Fenice Milano offers the chance to take advantage of the experience of its artisans, designers and technicians also to those who would like to realize their own projects, starting from models other than the ones proposed and branded Fenice Milano.
